

A

Acme Gatekeeper

Enforcement and policy solution for production AI

What we will cover

01 **The problem** governance lags adoption in enforcement

02 **The gateway** one deterministic door in front of every model

03 **Proof** what a customer got in under an hour

04 **Roadmap and pricing** where this goes and what it costs

Fast-growing companies adopt AI faster than they can control it

A fifty-person **engineering team** might now connect eight model **providers** across product, support, and **internal** tools - with zero unified audit trail, unpredictable monthly token invoices, and no automated compliance checks.

What that costs them

1

Customer audit failures when enterprise clients ask

2

Surprise token spikes discovered only at billing

3

Fragmented policies written in ad-hoc prompt code

4

Unchecked PII and secret leaks across shadow tools

HOW DOES IT WORK

A single deterministic gateway in front of every model

Every outbound LLM call passes through Acme before reaching upstream providers.

Policies evaluate through Open Policy Agent

(OPA), keeping rules declarative, version-controlled, and testable in CI/CD.

Zero changes to existing application code: swap one base URL in your client configuration and enforce policy on day one.

ACME.

How Acme protects your workload

1

Enforce

OPA inspects and validates requests before egress.

2

Record

Immutable event stream of prompt hashes, latency, and tokens.

3

Redact

Real-time PII masking and secret prevention at the wire.

4

Comply

Instant audit packages for ISO 27001, SOC 2, and GDPR.

Operating with & without Acme

Today

AUDIT TRAIL

Ad-hoc log queries

COST ALLOCATION

Aggregate month-end bill

POLICY ENFORCEMENT

Confluence guidelines

PROVIDER ONBOARDING

Weeks of security review

DATA RESIDENCY

Unknown routing

With Acme

AUDIT TRAIL

Signed event stream (7 yrs)

COST ALLOCATION

Per-team attribution, live

POLICY ENFORCEMENT

Declarative OPA bundles

PROVIDER ONBOARDING

15-minute credential update

DATA RESIDENCY

Guaranteed EU-only egress

When our enterprise bank clients asked for our AI data governance records, we delivered verified OPA enforcement logs in under an hour. Acme turned a potential sales blocker into our strongest trust proof.

VP of Engineering, Series B Fintech (Stockholm)

Where Acme plays

IMPACT ON RISK	Prompt guidelines cheap, and nobody follows them	ACME: Gateway policy one URL swap, every call governed
	Manual audits weeks of work per review	Model retraining months, and the risk moves elsewhere

EFFORT TO ADOPT

Acme by the numbers

5 min

to first governed call

500 000

avg requests a day
through customers'
gateways

\$2.4M

of token spend attributed
to teams last quarter

200 Mtok/s

peak throughput, no
added latency

Product roadmap \ 2027

Q1

Turnkey OPA policy bundles for basic compliance.

Q2

Real-time semantic budget limits and anomalous spend throttling.

Q3

Air-gapped on-premise appliances and self-hosted VPC agents.

Q4

Native zero-trust egress connectors for sovereign European LLMs.

Transparent, usage-based pricing

Tier	Workspaces	Monthly Requests	Retention & Compliance	Price
Team	3	Up to 500k reqs	90-day signed logs	490 € / mo
Business	10	Up to 5M reqs	2-year audit vault	1 450 € / mo
Enterprise	Unlimited	Custom volume	7-year vault + VPC	Custom

Built by infrastructure engineers

Founded by former payment security and distributed systems leads from More Inc and Bank of Tor. We built Acme after managing compliance across 400+ LLM services internally. Today, Acme governs production traffic across 18 European tech companies.
